

Uploading code to github

1. Install git version control on computer at <https://git-scm.com/downloads>
2. Create account on www.github.com
3. Go to "Your Repositories" and click green button "new repository"
4. Give your repository a name (preferably sideProjects or something along the lines of that)
5. Clone your repository using `git clone [enter your folder name here without the brackets]`
6. Now you'll have a folder to put your code in. This folder is the folder that can link up with the same folder that's on your github website.
7. When adding files, use command `git add *`
8. When committing files, use command `git commit -m "commit message here"`
9. When pushing files (updating your github website) use command `git push`
10. After making sure github code upload works smoothly, email your github profile link to kevindkim723@gmail.com
